Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Original) A universal serial bus (USB) remote host control driver, comprising:

a connection to a network, said network further connecting to one or more USB device adapters, each of said device adapters having a discrete network address;

a network protocol stack, said protocol stack for encapsulating USB packets in network packets and for decapsulating USB packets from network packets; and

a memory for storing the network address of each of said device adapters and for storing an identification of each USB device connected to each of said device adapters.

- 2. (Original) The USB remote host control driver of claim 1, further comprising: a polling routine, said polling routine contacting each of said device adapters, identifying each of said USB devices, and storing the identifications in said memory.
- 3. (Original) The USB host control driver of claim 1, where the network packets are Ethernet packets.
- (Original) A USB device adapter comprising:
 one or more USB ports;

a connection to a network, said network connected to a USB remote host control driver;

a network address;

a network protocol stack, said protocol stack for encapsulating USB packets in network packets and for decapsulating USB packets from network packets.

- 5. (Original) The USB host control driver of claim 4, where the network packets are Ethernet packets.
- a connection to the Internet; and
 a universal serial bus (USB) remote host control driver, said USB remote host

An Internet gateway, comprising:

- (a) a connection to a local network, said local network further connecting to one or more USB device adapters, each of said device adapters having a discrete network address;
- (b) a local network protocol stack, said protocol stack for encapsulating
 USB packets in local network packets and for decapsulating USB packets from local
 network packets;
- (c) a memory for storing the network address of each of said device adapters and for storing an identification of each USB device connected to each of said device adapters; and

6.

(Original)

control driver having:

- (d) a polling routine, said polling routine contacting each of said device adapters, identifying each of said USB devices, and storing the identifications in said memory.
- 7. (Original) The Internet gateway of claim 6, where the local network is an Ethernet.
- 8. (Original) The Internet gateway of claim 6, further comprising:

 a processor, said processor for receiving unencapsulated USB packets from the protocol stack.

9. (Original) The Internet gateway of claim 8, further comprising: a connection to a local video monitor.

- 10. (Original) The Internet gateway of claim 8, further comprising:
 a connection to a local telephone.
- 11. (Original) The Internet gateway of claim 8, further comprising: a connection to a public television cable.
- 12. (Original) The Internet gateway of claim 8, further comprising: a connection to a public telephone network.

Docket No.: CISCO-1608

Appl. No. 09/618 Amdt. dated April 1, 2004
Reply to Office Action of March 25, 2004

13. (Withdrawn) A method for providing a signal from a USB device over a local network to a local processor, the method comprising:

generating a USB packet at the USB device;
encapsulating the USB packet in one or more network packets;
transmitting the network packets over the network;
decapsulating the USB packet from the network packets; and
providing the USB packet to the processor.

- 14. (Withdrawn) The method of claim 13, wherein the local network is an Ethernet.
- 15. (Withdrawn) The method of claim 13, wherein the USB device is a keyboard.
- 16. (Withdrawn) A method for establishing a connection between a local processor and a USB device over a local network, the method comprising:

configuring a USB device adapter candidate list, said list including the network address of at least one USB device adapter;

polling an address on the candidate list, said polling including encapsulating a USB packet in one or more network packets;

receiving a positive response from a USB device adapter to said polling, said receiving including decapsulating a USB packet from one or more network packets; and adding the address and a USB device adapter identifier to a master list.

Docket No.: CISCO-1608

Appl. No. 09/618 Amdt. dated April 1, 2004 Reply to Office Action of March 25, 2004

17. (Withdrawn) The method of claim 16, further comprising:

polling a port on a USB adapter device on the master list, said polling including encapsulating a USB packet in one or more network packets;

receiving a positive response from a USB device connected to said port, said receiving including decapsulating a USB packet from one or more network packets; and enumerating a USB device in the operating system of the processor.

18. (Withdrawn) A method for providing a signal from a USB device to a processor on the Internet, the method comprising:

generating a USB packet at the USB device;
encapsulating the USB packet in one or more local network packets;
transmitting the local network packets over a local network;
decapsulating the USB packet from the local network packets;
encapsulating the USB packet in one or more IP packets;
transmitting the IP packets over the Internet; and
providing the IP packets to the processor.

19. (Withdrawn) An apparatus for providing a signal from a USB device over a local network to a local processor, comprising:

means for generating a USB packet at the USB device;
means for encapsulating the USB packet in one or more network packets;
means for transmitting the network packets over the network;

means for decapsulating the USB packet from the network packets; and means for providing the USB packet to the processor.

- 20. (Withdrawn) The apparatus of claim 19, wherein the local network is an Ethernet.
- 21. (Withdrawn) The apparatus of claim 19, wherein the USB device is a keyboard.
- 22. (Withdrawn) An apparatus for establishing a connection between a local processor and a USB device over a local network, comprising:

means for configuring a USB device adapter candidate list, said list including the network address of at least one USB device adapter;

means for polling an address on the candidate list, said means for polling including means for encapsulating a USB packet in one or more network packets;

means for receiving a positive response from a USB device adapter to said polling, said means for receiving including means for decapsulating a USB packet from one or more network packets; and

means for adding the address and a USB device adapter identifier to a master list.

23. (Withdrawn) The apparatus of claim 22, further comprising:

Docket No.: CISCO-1608

Appl. No. 09/618 Amdt. dated April 1, 2004 Reply to Office Action of March 25, 2004

means for polling a port on a USB adapter device on the master list, said means for polling including means for encapsulating a USB packet in one or more network packets;

means for receiving a positive response from a USB device connected to said port, said means for receiving including means for decapsulating a USB packet from one or more network packets; and

means for enumerating a USB device in the operating system of the processor.

(Withdrawn) An apparatus for providing a signal from a USB device to a 24. processor on the Internet, comprising:

means for generating a USB packet at the USB device; means for encapsulating the USB packet in one or more local network packets; means for transmitting the local network packets over a local network; means for decapsulating the USB packet from the local network packets; means for encapsulating the USB packet in one or more IP packets; means for transmitting the IP packets over the Internet; and means for providing the IP packets to the processor.

25. (Withdrawn) A program storage device readable by a machine, embodying a program of instructions executable by the machine to perform a method for providing a signal from a USB device over a local network to a local processor, the method comprising:

generating a USB packet at the USB device;
encapsulating the USB packet in one or more network packets;
transmitting the network packets over the network;
decapsulating the USB packet from the network packets; and
providing the USB packet to the processor.

- 26. (Withdrawn) The device of claim 25, wherein the local network is an Ethernet.
- 27. (Withdrawn) The device of claim 25, wherein the USB device is a keyboard.
- 28. (Withdrawn) A program storage device readable by a machine, embodying a program of instructions executable by the machine to perform a method for establishing a connection between a local processor and a USB device over a local network, the method comprising:

configuring a USB device adapter candidate list, said list including the network address of at least one USB device adapter;

polling an address on the candidate list, said polling including encapsulating a USB packet in one or more network packets;

receiving a positive response from a USB device adapter to said polling, said receiving including decapsulating a USB packet from one or more network packets; and adding the address and a USB device adapter identifier to a master list.

Docket No.: CISCO-1608

29. (Withdrawn) The device of claim 28, wherein the method further comprising:

polling a port on a USB adapter device on the master list, said polling including encapsulating a USB packet in one or more network packets;

receiving a positive response from a USB device connected to said port, said receiving including decapsulating a USB packet from one or more network packets; and enumerating a USB device in the operating system of the processor.

30. (Withdrawn) A program storage device readable by a machine, embodying a program of instructions executable by the machine to perform a method for providing a signal from a USB device to a processor on the Internet, the method comprising:

generating a USB packet at the USB device;

encapsulating the USB packet in one or more local network packets;

transmitting the local network packets over a local network;

decapsulating the USB packet from the local network packets;

encapsulating the USB packet in one or more IP packets;

transmitting the IP packets over the Internet; and

providing the IP packets to the processor.
